# About

**SensorSeer** is a universal mobile meter app for sensors. Designed to communicate with supported industrial sensing devices via Bluetooth smart technology.

## How does it work?

Combine with **Anuraco BLE-485 Adaptor** and your cellphone or tablet becomes a powerful handheld field meter for sensors with RS485, MODBUS and SDI12 interfaces. **SensorSeer** works *without* Wifi or cellular connectivity for remote, low-power monitoring.

You can label your adaptor, set baud rate, parity, battery change date for your adaptor, as well as security settings which allow for locking/unlocking of your device.

## Advantages of **SensorSeer**:

- + communicate to industrial smart sensors, wirelessly
- + real-time sensor diagnostics
- + internet connection not required
- + laptop not required
- + one BLE-485 adaptor can connect with up to 32 sensors on a serial bus
- + utilizes Bluetooth 4.0 Low energy smart technology available in most cell-phones, tablets and PCs
- + set BLE-485 adaptor baud rate, parity, name and security password
- + can integrate with custom sensor types
- + security feature locks device for data protection

## General devices supported:

- + Sensors with RS485, SDI12 and Modbus protocols

## Specific sensors supported:

- + STP Snowpack sensor
- + INW ([www.inwusa.com](http://www.inwusa.com)) dataloggers, including:
  - + PT2X, ressure temperature sensor.
  - + CT2X, conductivity temperature sensor.
- + LevelScout, pressure temperature sensor
- + T8, thermistor sensor

# General outline

0- Download and open **SensorSeer** .

1- Turn on BLE-485 Adaptor and make sure it is active (Blue Blink)

2- Scan for BLE using the Bluetooth button and connect to Adapter (Green Blink)

3- Check that communication parameters are correct for the attached sensor

4- Click FIND SENSORS.

5- Select the desired sensor

6- Measure

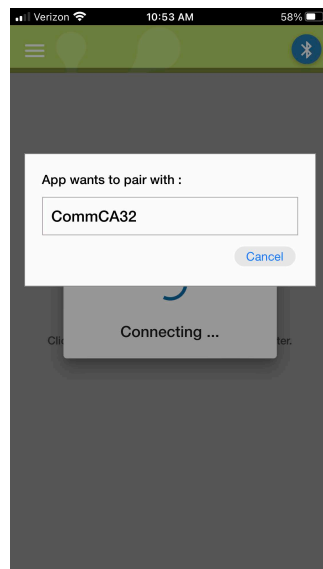

7- Record and display

8- Share data via email or message

Main Menu >

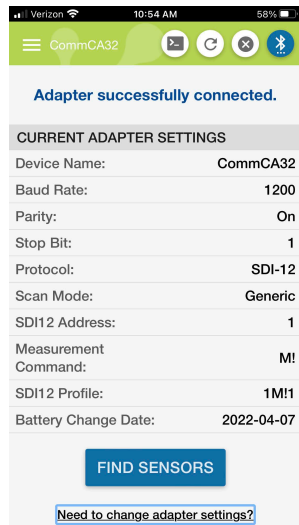

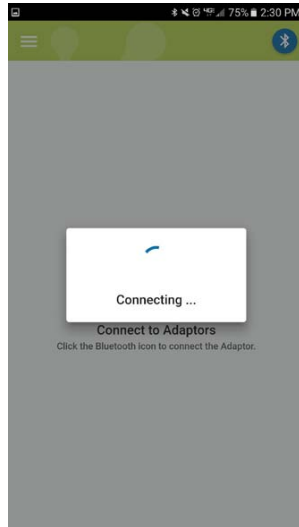

; **START HERE  
WITH A CLICK**

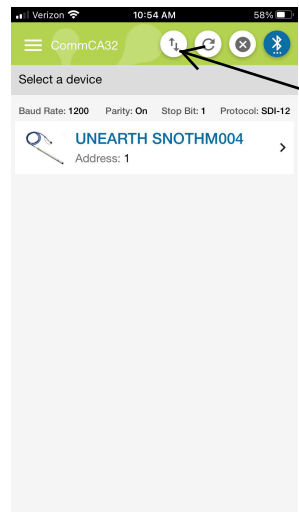

<**Select adapter here**

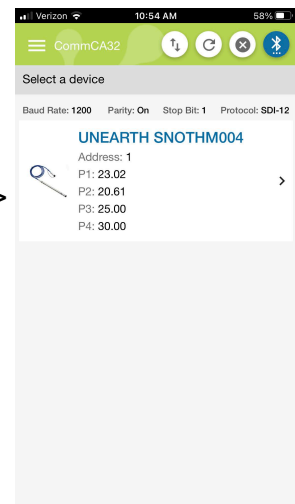

# Connect to Adaptor

<Click here to find an attached sensor

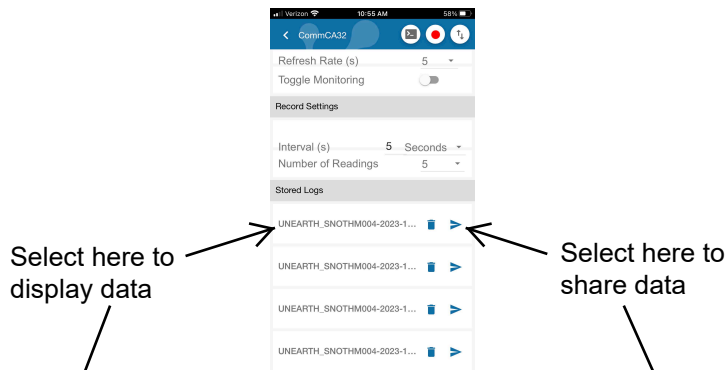

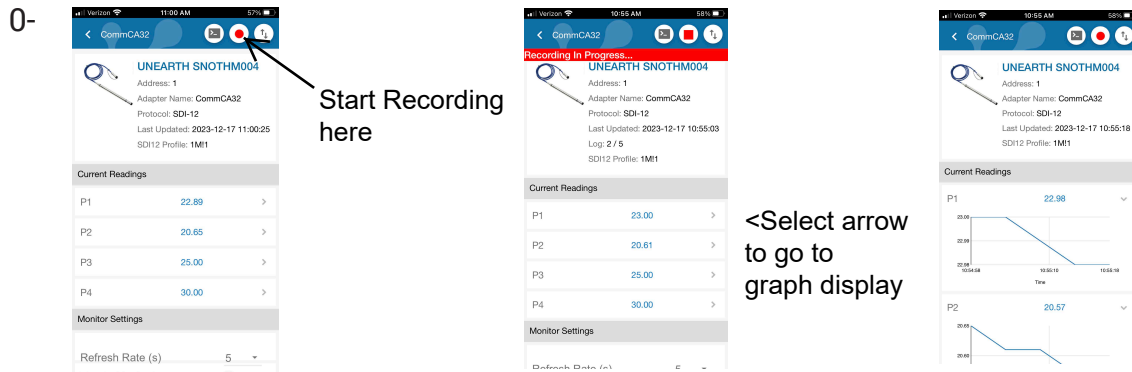

Take a measurement here

Result >

Select arrow to go to log screen

# =View Device Data, Log and Share
